Cogs 501 - For. Lang. & Ling. Fall 2015

Homework 6 Solution

Question 1

A context-free grammar *G* is a quadruple $\langle V_N, V_T, R, S \rangle$ where

 V_N is the set of **non-terminal** symbols,

 V_T is the set of **terminal** symbols,

R is the set of **rules** each of the form $A \to x$, where $A \in V_N$ and $x \in (V_N \cup V_T)^*$,

 $S \in V_N$ is the **start** symbol.

A step in a derivation can be characterized as follows. For any $u, v \in (V_N \cup V_T)^*$, we write $u \Rightarrow v$ (and say *v* is derived from *u* in one step) if and only if there are strings $x, y \in (V_N \cup V_T)^*$ such that u = xAy, v = xty, and the rule $A \rightarrow t$ is in *R*.

We call a sequence of the form:

$$w_0 \Rightarrow w_1 \Rightarrow w_2 \Rightarrow \cdots \Rightarrow w_n$$

a **derivation** of w_n from w_0 in *n* steps, where $n \ge 0$. When $w_0 = S$, we say that *G* generates w_n in *n* steps.

The language of a grammar G, denoted as L(G), is the set $\{w \in V_T^* \mid w \text{ is generated by } G\}$.

Given the context-free grammar

$$G = \langle \{S,A\}, \{a,b\}, S,$$

 $\{S
ightarrow AA,$
 $A
ightarrow AAA,$
 $A
ightarrow a,$
 $A
ightarrow bA,$
 $A
ightarrow Ab\}
angle$

Which strings of L(G) can be generated in four or fewer steps?

Solution: There are four strings in L(G): *aa*, *aba*, *baa*, *aab*. Only one of the possible derivations is given for each string.

 $S \Rightarrow AA \Rightarrow aA \Rightarrow aa$ $S \Rightarrow AA \Rightarrow AbA \Rightarrow abA \Rightarrow aba$ $S \Rightarrow AA \Rightarrow bAA \Rightarrow baA \Rightarrow baa$ $S \Rightarrow AA \Rightarrow AAb \Rightarrow aAb \Rightarrow aab$
